

Data Sheet

Calibration contract

BIZERBA

Regular calibration of the scales avoids unnecessary loss of production. With the Calibration contract you plan with foresight and at fair costs.

More information
High performance
with a wide range of
solutions and options.

Our services at a glance

Calibration

- Functional test of the scale
- Calibration of the scale
- Identification of the scale after calibration
- Documentation and test protocols
- Calibration of the scale in the event of metrological deviation (only Bizerba scales)
- Initiating of repair management

Calibration management

- Consulting and support
- Registration of all scales for inspection equipment monitoring, also 3rd party devices
- Planning and monitoring of calibration appointments
- Information and communication of date when calibration is due
- Coordination and definition of date when calibration procedure is performed

Your benefit

With the Calibration contract, Bizerba supports you as a certified and experienced consultant in selecting the best calibration procedure and in defining the best calibration intervals. This means that you don't need specialist knowledge. You are on the safe side and receive an individual service package tailored to your needs. You want to have evidence of the reliability of the measuring results of your devices? Particularly when high quality and precision requirements are called for and expensive raw materials are being processed - this is elementary.

Bizerba also takes care of the planning and monitoring of the regular calibration deadlines. The optimized process prevents the expensive economic consequences of weighing deviations. Thanks to Bizerba taking over inspection equipment management of all the scales and thus establishing an overview, you benefit from a high level of stability in the entire process.

Benefit from minimal effort by having the calibration performed at your site. This gives you maximum flexibility with minimized downtimes.

To make the performed calibration visible to you and your customers, the scales are marked with a calibration label. In addition, you can refer to the calibration documentation and inspection report provided by us at any time.

The desire for a simple payment method, predictable costs, cost control and transparency is provided with this type of contract - as internal costs and time are saved if you take advantage of the contract.

Bizerba Service is a competent contact partner, who knows your situation and needs and is quickly available. We are your reliable partner and solutions provider with the "From a single source" advantage.

Special features

Our 2 in 1 offer: After detailed inspection by a technician will be decided before a calibration whether a repair or adjustment needs to be carried out due to deviations. The calibration is triggered automatically with no extra order being necessary.

Bizerba also has the know-how to take care of the proper calibration of third party devices and is happy to do this.

The organization of devices for performing the calibration by Bizerba prevents commissioning of other companies. The number of service providers at the customer can thus be kept down.

Options

- Runtime between 12 and 60 months
 - Calibration as per DAkkS [German Accreditation Body] (if available in the country)
 - Provision of weights
 - Transport of weights
-
